Advancing Life-Changing Discoveries in Neuroscience

Q1 2024 Corporate Presentation May 1, 2024

Nasdaq: NBIX

Safe Harbor Statement and Non-GAAP Financial Measures

In addition to historical facts, this presentation contains forward-looking statements that involve a number of risks and uncertainties. These statements include, but are not limited to, statements related to: the benefits to be derived from our products and product candidates; the value our products and/or our product candidates may bring to patients; the continued success of INGREZZA; our financial and operating performance, including our future revenues, expenses, or profits; our collaborative partnerships; expected future clinical and regulatory milestones; and the timing of the initiation and/or completion of our clinical, regulatory, and other development activities and those of our collaboration partners. Among the factors that could cause actual results to differ materially from those indicated in the forward-looking statements are: our future financial and operating performance; risks and uncertainties associated with the commercialization of INGREZZA; risks related to the development of our product candidates; risks associated with our dependence on third parties for development, manufacturing, and commercialization activities for our products and product candidates, and our ability to manage these third parties; risks that the FDA or other regulatory authorities may make adverse decisions regarding our products or product candidates; risks that clinical development activities may not be initiated or completed on time or at all, or may be delayed for regulatory, manufacturing, or other reasons, may not be successful or replicate previous clinical trial results, may fail to demonstrate that our product candidates may be precluded from commercialization by the proprietary or regulatory rights of third parties, or have unintended side effects, adverse reactions or incidents of misus? risks associated with povernment and third-party regulatory and/or policy efforts which may, among other things, impose sales and pharmaceutical pricing controls on our products or limit coverage and/or reimbursement for our

In addition to the financial results and financial guidance that are provided in accordance with accounting principles generally accepted in the United States (GAAP), this presentation also contains the following non-GAAP financial measures: non-GAAP R&D expense, non-GAAP SG&A expense, and non-GAAP net income and net income per share. When preparing the non-GAAP financial results and guidance, the Company excludes certain GAAP items that management does not consider to be normal, including recurring cash operating expenses that might not meet the definition of unusual or non-recurring items. In particular, these non-GAAP financial measures exclude: non-cash stock-based compensation expense, loss on extinguishment of convertible senior notes, charges associated with convertible senior notes, non-cash interest expense related to convertible debt, non-cash amortization expense related to acquired intangible assets, acquisition and integration costs, changes in fair value of equity security investments, changes in foreign currency exchange rates and certain adjustments to income tax expense. These non-GAAP financial measures are provided as a complement to results provided in accordance with GAAP as management believes these non-GAAP financial measures help indicate underlying trends in the Company's business, are important in comparing current results with prior period results and provide additional information regarding the Company's financial position. Management also uses these non-GAAP financial measures to establish budgets and operational goals that are communicated internally and externally and to manage the Company's business and evaluate its performance. The Company provides guidance regarding combined R&D and SG&A expenses on both a GAAP and a non-GAAP basis. A reconciliation of these GAAP financial results to non-GAAP financial results is included in this presentation.

Where Are We Today?

- Discovered and Developed Three Novel FDA-Approved Programs
- **Deep Expertise** in Neuroscience Drug Development
- Fully-Integrated Organization with Both R&D and Commercial Capabilities
- Growing Blockbuster Commercial Product in INGREZZA with Strong IP Protection
- Future Blockbuster Opportunity with Crinecerfont
- Largest Portfolio of Muscarinic Compounds in Clinical Development
- Strong Financial Profile That Can Support Significant R&D Investment

Building a Leading Neuroscience-Focused Company

Q1 2024 Highlights and 2024 Key Milestones and Activities

Q1 2024 / Recent Highlights

- Positive Phase 2 Top-Line Data For NBI-'845 (AMPA Potentiator) in Adults with Major Depressive Disorder (MDD)
- INGREZZA[®] (valbenazine) Net Product Sales of \$506M
 - Represents YoY Sales Growth of 23% vs. Q1 2023
 - Growth Driven By Strong Underlying Demand and Improvement in Gross To Net Dynamics
- New Drug Application (NDA) Approved for INGREZZA[®] SPRINKLE (valbenazine) Oral Granules Formulation
- Submitted NDAs for Crinecerfont for the Treatment of Pediatric and Adult Patients with Classical Congenital Adrenal Hyperplasia
- Positive Phase 2 Top-Line Data for Efmody (hydrocortisone modified-release hard capsules) in AI and CAH
- Pipeline Progress Includes Several Recently Initiated Studies:
 - Phase 2 Study of NBI-'770 (Oral NMDA NR2B NAM) for MDD
 - Phase 1 Study of NBI-'890 (Next Generation VMAT2 Inhibitor)
 - Phase 1 Study of NBI-'986 (M4 Antagonist)
- Selected Two Gene Therapy Development Candidates For:
 - Friedrich's Ataxia
 - GBA1 for PD and Other GBA1-mediated diseases
- Published 2024 Corporate Sustainability Report (Link)

2024 Key Milestones and Activities

- Settle Senior Convertible Notes Due in May in Cash
- Present Efficacy and Tolerability Details from Phase 3 CAHtalyst[™] Studies of Crinecerfont at ENDO Conference in June
- Engage with FDA to Define Registrational Path Forward for NBI-'845
- Report Phase 2 Top-Line Data In Q3 2024:
 - NBI-'568 (M4 Agonist) for Treatment of Schizophrenia
 - Luvadaxistat (DAAO Inhibitor) for Cognitive Impairment Associated with Schizophrenia
- Initiate Phase 1 Study of NBI-'567 (M1 Agonist) in 2024
- Ongoing Phase1 Muscarinic Agonist Studies:
 - NBI-'567 (M1 Agonist)
 - NBI-'569 (M4 Agonist)
 - NBI-'570 (Dual M1 / M4 Agonist)
- Advance Broadest and Most Diverse Muscarinic Portfolio in Industry

AMPA = alpha-amino-3-hydroxy-5-methyl-4-isoxazole propionic acid; AI = Adrenal Insufficiency; CAH = Congenital Adrenal Hyperplasia; NMDA NR2B NAM = n-methyl-d-aspartate Receptor Subtype 2B Negative Allosteric Modulator; VMAT2 = Vesicular Monoamine Transporter 2; M4 = M4 Muscarinic Receptor; PD = Parkinson's Disease; FDA = U.S. Food and Drug Administration; DAAO = d-amino acid oxidase; M1 = M1 Muscarinic Receptor;

* Mitsubishi Tanabe Pharma Corporation (MTPC) has commercialization rights in Japan and other select Asian markets

† Nxera Pharma UK Limited (formerly Sosei Heptares) has retained rights in Japan; Neurocrine Biosciences may opt-in to a 50:50 cost and revenue share upon certain development events

(1) Nxera Pharma (2) Idorsia Ltd (3) Xenon Pharmaceuticals Inc (4) Sanofi (5) Takeda Pharmaceutical Company Ltd Neurocrine Biosciences has global rights unless otherwise noted.

Q1 2024 Financial Summary

\$ Millions, Except Non-GAAP Earnings Per Share

Item	Q1 2024	Q1 2023	Highlights / Comments
Revenue - Product Sales, Net - Collaboration Revenue	\$515 509 6	\$420 415 5	INGREZZA Sales of \$506M Represents YoY Growth of 23% Driven by Strong Underlying Patient Demand and Improvement in Gross-to-Net Dynamics
Non-GAAP R&D Expense	\$142	\$126	Increase Driven by Expanded / Advancing Portfolio
Non-GAAP SG&A Expense	\$216	\$217	Flat YoY Expense Includes Continued Investment in INGREZZA and Incremental Investment in Crinecerfont-Related Costs
Non-GAAP Net Income	\$125	(\$51)	Increase Driven by Higher INGREZZA Sales Partially Offset by Incremental Operating Expenses; Q1 2023 Included \$144M IPR&D Expense Associated with Expanded Voyager Collaboration
Non-GAAP Earnings per Share, Diluted	\$1.20	(\$0.51)	
Cash and Investments (Period End)	\$1,911	\$1,139	

Reaffirmed 2024 INGREZZA Net Sales Guidance and Updated Expense Guidance

Item (\$ Millions)	2023 Actuals	2024 Previous Guidance Range	2024 Current Guidance Range	Comments
INGREZZA Net Product Sales ¹	\$1,836	\$2,100 - \$2,200	\$2,100 - \$2,200	Net Sales Guidance Reaffirmed
GAAP R&D Expense ²	\$565	\$645 - \$675	\$665 - \$695	
Non-GAAP R&D Expense ³	\$497	\$570 - \$600	\$600 - \$630	Updated GAAP and Non-
GAAP SG&A Expense ⁴	\$888	\$930 - \$950	\$920 - \$940	(Incremental Milestone Expense Partially Offset by Lower SG&A Expense)
Non-GAAP SG&A Expense ^{3, 5}	\$757	\$830 - \$850	\$810 - \$830	

- 1. INGREZZA sales guidance reflects expected net product sales of INGREZZA in tardive dyskinesia and chorea associated with Huntington's disease.
- 2. GAAP R&D guidance includes approximately \$34 million expense for development milestones in connection with our collaborations (Nxera, Voyager and Takeda) achieved in first quarter 2024 or achievement is deemed probable in second quarter 2024. These milestone expenses are associated with our advancing pre-clinical and clinical pipeline.
- 3. Non-GAAP guidance adjusted primarily to exclude estimated non-cash stock-based compensation expense of \$65 million in R&D and \$110 million in SG&A
- 4. Acquired in-process research and development expense (IPR&D) is included in guidance once significant collaboration and licensing arrangements have been completed.
- 5. SG&A guidance range reflects expense for ongoing commercial initiatives supporting INGREZZA growth including the expanded indication to treat chorea associated with Huntington's disease and pre-launch commercial activities for crinecerfont.

Corporate Sustainability: "A" Rated at MSCI and Rank in 11th Percentile for Biotech at Sustainalytics

Our Purpose: Relieve Suffering for People with Great Needs, but Few Options

Adhere to the highest product quality and safety standards

Comprehensive Quality System that aligns with:

- Good Manufacturing Practices (GMP)
- Good Laboratory Practices (GLP)
- Good Clinical Practices (GCP)

Invest in our people and communities

Industry-leading employee engagement and diversity

- Top decile employee engagement among biopharmaceutical peers
- Gender and racial/ethnic diversity above biotech industry benchmark*

Improving profitability and yields through green chemistry

- ~30% improvement in yields
- ~65% reduction in waste
- ~65% reduction in water use

Our Medicines, Our Patients

Multiple Commercial Products

In the U.S.

TARDIVE DYSKINESIA

CHOREA ASSOCIATED WITH HD

rilissa elagolix tablets ^{150 mg} 200 mg **ENDOMETRIOSIS** riahnn elagolix, estradiol and norethindrone acetate capsules

UTERINE FIBROIDS

In the U.S. and Europe

hydrocortisone granules in capsules for opening

ADRENAL INSUFFICIENCY

In Europe

Hydrocortisone modifiedrelease hard capsules

CONGENITAL ADRENAL HYPERPLASIA

HD = Huntington's Disease
 *Mitsubishi Tanabe Pharma Corporation (MTPC) has commercialization rights in Japan and other select Asian markets
 †AbbVie has global commercialization rights

INGREZZA Quarterly Net Sales Performance

Substantial Impact on TD Patients and Care Partners

Movement disorder caused by prolonged use of antipsychotics and anti-nausea medications

Uncontrollable, abnormal and repetitive movements

>50%

of patients experience meaningful emotional, social and psychological impact^{*}

Job Performance

Patients believe TD affects their ability to perform their job

Low Self-Worth

Psychiatric patients may already have difficulty gaining stability and social acceptance

Isolation

Loss of physical control may make patients more likely to withdraw from social situations

Nascent Tardive Dyskinesia Market Presents Significant Opportunity

Sources: Neurocrine Biosciences Quarterly Data, IQVIA SMART VMAT2 = Vesicular Monoamine Transporter 2

INGREZZA[®] Approved by the FDA for the Treatment of Chorea Associated with Huntington's Disease

INGREZZA

Simple once-a-day treatment targeted for symptom control of chorea movements

Safety profile consistent with and supported by extensive safety data in tardive dyskinesia

In randomized, double-blind, placebo-controlled KINECT-HD study, treatment with valbenazine resulted in a placebo-adjusted mean reduction in the TMC* score of 3.2 units (p < 0.0001)

Chorea affects ~90% of the 40,000 patients with HD in the U.S.

Rare neurodegenerative disorder in which neurons within the brain break down

Patients develop
 involuntary
 abnormal, abrupt or
 irregular movements

INGREZZA MAKES DOSING SIMPLE FROM THE START: No complex dose adjustments Always one capsule, once daily Taken any time With or without food Can be added to most stable mental health regimens

Healthcare provider educational initiatives, including web-based MIND-TD.com

Neuropsychiatry Pipeline

NBI-1065845* (AMPA Potentiator): Reported Positive Phase 2 Top-Line Study Results in Adults with Major Depressive Disorder

Inadequate Response to Treatment in Major Depressive Disorder (MDD)

~**1/3 of the 16 million+ people** in the U.S. who live with MDD do not respond to available antidepressants.

MDD symptoms are characterized by a persistently depressed mood or loss of interest in daily activities that can impact normal daily functioning, relationships, and overall quality of life.

Current treatments range from selective serotonin reuptake inhibitors (SSRIs), serotonin norepinephrine reuptake inhibitors (SNRIs), and antidepressants along with behavioral therapy.

NBI-1065845 (or NBI-'845)

Potent first-in-class AMPA potentiator

- Oral
- Once daily

Antidepressant effects may be mediated by activation of AMPA and resultant downstream pathways

Phase 2 SAVITRI Study:

- Met primary endpoint with statistically significant reduction in Montgomery Åsberg Depression Rating Scale (MADRS) total score at day 28
- Met key secondary endpoints, including statistically significant reduction in MADRS total score at day 56
- NBI-'845 was generally well-tolerated

Next Steps: Engage with FDA to define path forward to registration

NBI-1065845* (AMPA Potentiator): SAVITRI[™] Phase 2 Study Summary Results

EFFICACY

- The study met its primary and key secondary endpoints
- Once-daily, oral administration of NBI-'845 produced a statistically significant change from baseline in Montgomery Åsberg Depression Rating Scale (MADRS) total score at both Day 28 (primary) and Day 56 (secondary).
- In the full analysis data set, the least squares (LS) mean differences from baseline in MADRS total score were:

Statistically Significant Dose	Day 28	Day 56
Improvement over Placebo	-4.3	-7.5
p-value	0.0159	0.0016
Effect size	0.53	0.73
Other Dose	Day 28	Day 56
Improvement over Placebo	-3.0	-3.6
p-value	0.0873	0.1082
Effect aize	0.20	0.22

SAFETY AND TOLERABILITY

- NBI-1065845 was generally well-tolerated
- Most common adverse event was headache, of which, a majority were transient and mild in severity
- Adverse event profile for both doses of NBI-1065845
 were comparable to placebo
- No seizures, deaths, or serious adverse events
- No psychotomimetic or dissociative events throughout the study
- Discontinuation rates were low throughout the study

Luvadaxistat*: D-Amino Acid Oxidase (DAAO) Inhibitor in Phase 2 Study with Top-Line Data Expected in Q3 2024

Cognitive Impairment Associated with Schizophrenia (CIAS)

Affects approximately **80% of the 3.5 million** people in the U.S. diagnosed with schizophrenia

CIAS symptoms are characterized by poor mental function and include difficulty paying attention, processing information and making decisions

No U.S. FDA-approved treatments

specifically indicated for CIAS

Luvadaxistat

Potent first-in-class DAAO inhibitor

- · Once daily
- No titration requirement

Hypofunction of glutamatergic signaling has been implicated in the pathophysiology of schizophrenia

Phase 2 INTERACT study data showed luvadaxistat met secondary endpoints of cognitive assessment

Ongoing Phase 2 study in CIAS

- Evaluate safety and efficacy of luvadaxistat compared to placebo on improving cognitive performance in participants with schizophrenia
- Top-line data read-out expected in Q3 2024

Developing Novel Muscarinic System Portfolio

Neurocrine Biosciences Advancing Muscarinic Portfolio

- Phase 2 placebo-controlled study of NBI-1117568*, a selective M4 agonist, as a potential treatment for schizophrenia with top-line data expected in Q3 2024
 - ✓ NBI-1117568 offers the potential for an improved safety profile:
 - □ Without the need of combination therapy to minimize side effects
 - Avoids the need of cooperativity with acetylcholine when compared to non-selective muscarinic agonists and positive allosteric modulators in development

Phase 1 Studies for:

- ✓ NBI-1117567* (M1 preferring agonist)
- ✓ NBI-1117569* (M4 preferring agonist) → for central nervous system disorders
- ✓ NBI-1117570* (dual M1 / M4 agonist)_
- ✓ NBI-1076986 (M4 antagonist) for movement disorders

Valbenazine*: ATS Study Will Inform Development of Our Next-Generation VMAT2 Inhibitors Including NBI-1065890 (Currently in Phase 1)

Adjunctive Treatment of Schizophrenia (ATS)

Schizophrenia is one of the **leading causes of disability** worldwide, affecting **up to 3.5M people** in the U.S. alone.

A serious, chronic mental illness that causes **abnormal thoughts, feelings and actions**.

Estimated that ~30% of patients with schizophrenia in the U.S. do not adequately respond to antipsychotic therapy, underscoring a clear unmet need for improved pharmacological approaches.

Neuroendocrinology Pipeline

Classic Congenital Adrenal Hyperplasia (CAH)

Rare Genetic Disorder

Treatment Options Stagnant for 60 Years

- Hormone replacement
- Do not address underlying issue

Classic Congenital Adrenal Hyperplasia Due to 21-Hydroxylase Deficiency (210HD CAH)

210HD CAH Results in:

- Impaired Synthesis of Cortisol and (Often) Aldosterone
- Excess Adrenal Androgen
 Production

Treatment Must Balance Consequences of:

- Supraphysiologic Glucocorticoid (GC) Doses
- High ACTH and Androgen
 Excess

Adapted from: Han TS et al. Nat Rev Endocrinol. 2014;10(2):115-24.

210HD = adrenal steroid 21-hydroxylase deficiency Mallappa A and Merke DP. *Nat Rev Endocrinol.* 2022;43(1):91-159. ACTH, adrenocorticotropic hormone; GC, glucocorticoids; TARTs, testicular adrenal rest tumors.

Classic Congenital Adrenal Hyperplasia Due to 21-Hydroxylase Deficiency (210HD CAH)

CAHtalyst[™] Adult and Pediatric Study Androgen Reduction

		Percent Androstene (Following Glucoce	Change* in dione at Week 4 orticoid Stable Period)
Study Characteristic	Adult Study (N = 182)	Pediatric Study (N = 103)	Key Takeaways
Patients Receiving Crinecerfont	-45%	-54%	Substantial and Meaningful Reduction in Androgens with Crinecerfont by 4 Weeks
Patients Receiving Placebo	+21%	+33%	Increase in Androgens on Placebo Reflecting Poor Disease Control Despite High Dose Steroids
Placebo-Adjusted Difference (Patients Receiving Crinecerfont – Patients Receiving Placebo)	-66%	-86%	Similar to Androgen Reduction Observed in Phase 2 Open-Label Studies (14 days)
P-value	<0.0001	<0.0001	

CAHtalyst[™] Adult and Pediatric Study Glucocorticoid Dose Reduction While Maintaining Androgen Control

	Percent of Subjects Achieving a Glucocorticoid Daily Dose ≤ 11 mg/m²/day While Maintaining Androgen Control					
CAHtalyst [™] Trial Participants	Adult Study @ Pediatric Study @ Key Takeaways Week 24 Week 28					
Patients Receiving Crinecerfont	63%	30%	Substantial Percentage of Patients on Crinecerfont Achieved Physiologic GC Dose <u>with</u> Androgen Control			
Patients Receiving Placebo	18%	0%	No Pediatric Patients on Placebo Achieved Physiologic GC Dose Reflecting Inadequacy of GC to Treat High Androgen			
Placebo-Adjusted Difference (Patients Receiving Crinecerfont – Patients Receiving Placebo)	45%	30%	Similar Results in Adult and Pediatric Patients Considering Differences at Baseline and in Trials			
P-value	<0.0001	0.0009*				

In Addition, Treatment with Crinecerfont in Adult and Pediatric Patients Resulted in Significant Percent Reduction in Glucocorticoid Dose while Maintaining Androgen Control (p<0.0001 both studies)

CAHtalyst[™] Adult and Pediatric Study Safety and Tolerability

- Crinecerfont Treatment was Overall Well-Tolerated with Few Serious Adverse Events (SAEs), None Were Assessed as Related to Crinecerfont
- Most Common Adverse Events During the Double-Blind, Placebo-Controlled Period of the Adult Study were Fatigue, Headache, and Coronavirus Infection
- Most Common Adverse Events During the Double-Blind, Placebo-Controlled Period of the Pediatric Study were Headache, Fever, Vomiting, Upper Respiratory Tract Infection, and Nasopharyngitis
- No Safety Concerns Related to Adrenal Crisis

Crinecerfont Program Next Steps

- New Drug Applications (NDAs) Have Been Submitted to the FDA and Will Be Submitted Later to the European Medicines Agency
- Additional Information Regarding Results from the CAHtalyst[™] Pediatric and Adult Studies Will Be Provided at a Number of Medical Conferences in 2024 Including ENDO in June
- Working on Full Publication of Data from the CAHtalyst[™] Pediatric and Adult Studies in a Peer-Reviewed Journal in the Near Future
- The Open-Label Treatment Periods for the CAHtalyst[™] Pediatric and Adult Studies are Ongoing

Neurology Pipeline

Valbenazine*: Registrational Program in Dyskinetic Cerebral Palsy

Dyskinetic Cerebral Palsy (DCP)

A form of cerebral palsy (CP) that affects ~15% of the approximately 500,000 to 1M people in the U.S. diagnosed with the disease.

Can result in a range of **developmental delays**, **physical difficulties and involuntary muscle movements**.

No approved treatments. Many patients take off-label drugs with **low efficacy and unwanted side effects**.

Adjustments:					
Stock-based compensation expense - R&D	17.0		13.8		
Stock-based compensation expense - SG&A	27.5		26.1		
Charges associated with convertible senior notes 1	88.7		_		
Non-cash interest related to convertible senior notes	0.2		0.2		
Non-cash amortization related to acquired intangible assets	0.9		0.9		
Changes in fair value of equity security investments ²	(1.6)		(2.2)		
Income tax effect related to reconciling items ³	(51.3)		(11.7)		
Non-GAAP net income	\$ 124.8	\$	(49.5)		
Diluted earnings per share:					
GAAP	\$ 0.42	\$	(0.79)		
Non-GAAP	\$ 1.20	\$	(0.51)		

1. Reflects charges associated with election to cash settle principal and conversion premium of convertible senior notes and the requirement to bifurcate the embedded conversion option and accrete to other expense.

2. Reflects periodic fluctuations in the fair values of the Company's equity security investments.

3. Estimated income tax effect of non-GAAP reconciling items are calculated using applicable statutory tax rates, taking into consideration any valuation allowance and adjustments to exclude tax benefits or expenses associated with charges associated with convertible senior notes and non-cash stock-based compensation.
